

## Easy Edit Pro

Model : -

Easy Edit Pro

Make Your Own Website Changes

- No special software needed!
- No special skills required!
- No webmaster needed!
- No waiting!

If you are serious about using your website as an effective business tool, then you will definitely want to keep the content fresh and up-to-date. Now you can make simple text and image changes yourself!

What Does It Do?

This program will allow non-technical users to make content changes to their own website with a regular web browser.

Because the program will only allow changes to pre-defined areas referred to as snippets, you don't have to worry about accidentally changing site navigation or overall layout.

The interface works like a word processor, for example Microsoft Word. A few of the most common features are listed below:

- Permission-based to allow multiple users. Code is noted when a particular user makes a change.
- Creates valid html code.
- Ability to format, add and change text, hyperlinks and images.
- Available when you are.
- Allows you to upload images in designated folders.

Limitations and Restrictions

- Does not create new pages
- Does not make major design changes like layout or navigation
- Does not change content on other applications like blogs, photo galleries, forums, article managers, interactive polls, flash modules, etc.
- Is not owned by client

License summary

Easy Edit Pro may be licensed on an annual basis. The original setup costs will depend upon the size of your website and how many pages you would like permission to access. Additional pages can be created and new snippets may be added for an extra fee.

**Price : \$180.00**
