Mobile Website Analysis

Get a clear understanding of how your website is presented on mobile web devices.

Will you get noticed by the sought after tech savvy customer? Our full analysis will determine how (or if) your website is optimized for mobile devices such as the iPhone, Blackberry Storm, Palm OS, LG Voyager and Blackberry Curve.

With the public "on the run" it is more important than ever for your site to be found and useable. Mobile internet users are making purchase decisions while en route to their destination.

What you will receive:

1. Screenshot of your site from at least three different devices
2. A useability analysis
3. Recommendations for improvement

Your reports will be prepared in order to help you (or your web designer) make the necessary changes to improve your website's useability on a small screen web browser.

**Price : \$75.00**
